

ABBYY FastCapture – Web-based Scanning for Every Company

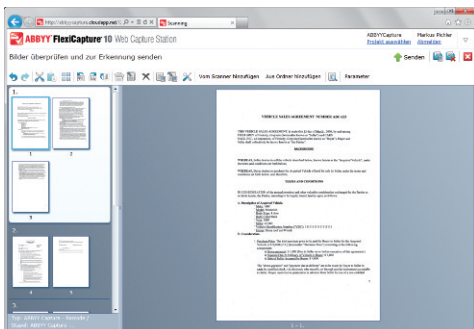

Powerful organisation-wide scanning solution for both centralised and decentralised scenarios

Using ABBYY FastCapture companies can easily and efficiently control the flow of incoming information. Documents – both paper and electronic – are converted to reusable data that can be archived and stored in downstream systems. This makes it easy for companies to quickly scan, index and export all of their business documents.

ABBYY FastCapture is simple to use and offers a wide range of features for capture experts. The solution integrates cutting-edge technologies in image pre-processing, OCR, ICR for form recognition, barcode extraction and creation of PDF and PDF/A files. The solution simplifies the indexing process and allocation of metadata using barcodes and enables companies to capture all documents easily, quickly and precisely. For large organisations this solution significantly lowers the costs of document archiving from their central headquarters and from remote locations and branch offices.

From paper to data – all via web browser

ABBYY FastCapture is the ideal solution for companies that want to implement centralised, decentralised or distributed document capture entirely via a web browser. Using the Web Capture Station all employees within the company or branch office can scan documents, index associated metadata manually or semi-automatically, and transfer the extracted data to downstream business processes for Archiving or further processing.

Web Capture: web-based scanning

Web Capture: web-based indexing

The flexible interface model makes it easy to connect to various ECM, DMS and even ERP systems. Microsoft® SharePoint® is also fully supported.

SOLUTION HIGHLIGHTS

- Centralised and decentralised capture of documents
- Scanning and indexing all via web client
- Easy installation and quick deployment
- Manual and semi-automatic indexing
- Automatic document separation
- Full-text OCR, barcode recognition and extraction
- Intuitive user interface
- Classification and capture of forms (ICR)
- Straightforward integration with various ECM, DMS and ERP systems
- PDF and PDF/A export for archiving

ABBYY FastCapture – Web-based Scanning for Every Company

Benefits for businesses

Completely scalable and easy to install

ABBYY takes care of the entire installation process, making rollout pain-free - even for beginners. Additional stations can be added easily and distributed via the web. Companies can also install fat clients in their office headquarters.

Flexible separation of documents

ABBYY FastCapture makes document processing far more efficient. It automatically separates documents into groups. Companies simply have to fill the scanner's automatic document feeder (ADF). ABBYY FastCapture then separates the documents using patch codes, barcodes and blank pages.

Outstanding recognition quality

ABBYY FastCapture allows you to process several documents simultaneously. You can also enlarge, reduce, rotate, group and reposition document images. Thanks to ABBYY's award-winning OCR technology and its integrated image enhancement tools, you can even enhance the quality of the original scanned document image.

Barcode recognition

ABBYY FastCapture recognises standard 1D and 2D barcodes, even if they have been distorted in some way (by stamps, handwriting, etc.). With colour scans barcodes can even be extracted easily at a low resolution. The position and alignment of the barcode is irrelevant.

Powerful data extraction

ABBYY FastCapture automatically extracts the desired data from business documents using OCR and ICR and applies barcode recognition. Extracting barcodes automatically and transferring them to index fields speeds up the process of data indexing for companies and, at the same time, increases recognition precision.

SharePoint integration

Thanks to the integration with Microsoft SharePoint, documents can be indexed, categorised and used for fast and easy access in SharePoint.

Automatic form recognition

In addition to simple document recognition, it is also possible to capture information from structured documents. Forms are processed automatically via ICR, thus significantly reducing manual work and saving costs.

Single click entry for fast indexing

Business documents can be indexed easily with one mouse click and the relevant index fields automatically filled with the selected data. This accelerates the entire indexing process.

Easy to use – for everyone

The web services architecture in ABBYY FastCapture enables documents to be captured via web browser. Users can capture documents using the Web Capture Station without any prior training and can process the documents in a familiar web environment.

Upgrade to ABBYY FlexiCapture

If a company's requirements for document processing increase, they can upgrade from ABBYY FastCapture to the high-end ABBYY FlexiCapture solution. Using this Enterprise Capture solution, they can classify their entire incoming mail system and even automate their invoice processing fully.

Searchable PDF/A

Using ABBYY's award-winning OCR you can generate searchable PDFs to allow your employees to search for information precisely and easily.

ABOUT ABBYY

ABBYY is a leading provider of text recognition and document conversion technologies and services. Its versatile product portfolio for document processing and information retrieval is available on various platforms and devices. ABBYY offers a broad range of

solutions designed for specific business and industry needs. Organisations all over the world rely on ABBYY offerings to optimise their paper-intensive business processes. More information on www.ABBYY.com
