

# McAfee VirusScan Enterprise

**Protect your desktops and file servers from malicious threats.**

## Key Advantages

### Unbeatable malware detection and removal

- Protect your files from viruses, worms, rootkits, Trojans, and other threats.

### Proactive protection from zero-day attacks

- Proactive protection against new and unknown buffer-overflow exploits that target vulnerabilities in Microsoft applications.

### Leverage McAfee GTI

- The worldwide presence of McAfee Labs enables McAfee VirusScan Enterprise to leverage protection across file, network, web, message, and vulnerability data.

### Manage your security

- The McAfee ePolicy Orchestrator® (McAfee ePO™) management platform provides centralized deployment, policy configuration and enforcement, and detailed, customizable reporting.

### Manage quarantined files

- Easily configure policies to manage and remove quarantined items.

### Enhanced email scanning

- Supports users who are using Microsoft Outlook or Lotus Notes.

Keeping networks free from a wide range of threats—viruses, worms, rootkits, and Trojans—is more challenging than ever. Whether your organization is a global enterprise with full-time security staff or a small or medium-size business, McAfee® VirusScan® Enterprise ensures that your endpoint servers, desktops, and laptops remain free from malware.

McAfee VirusScan Enterprise combines antivirus, antispymware, firewall, and intrusion prevention technologies to proactively detect and remove malware. It reduces the cost of managing outbreak responses, stops zero-day threats, and mitigates the window of vulnerability—the time between the discovery of a vulnerability and when fixes are deployed. Plus, with McAfee VirusScan Enterprise, you have the flexibility to detect and block malware based on your business needs: on access, on demand, or on a schedule.

## Unbeatable Malware Detection and Cleaning

McAfee VirusScan Enterprise uses the award-winning Intel® Security scanning engine to detect and clean malware and protect your files from viruses, worms, rootkits, Trojans, and other threats. Intel Security delivers comprehensive find-and-fix solutions for today's threats and uses behavioral analysis to protect against new and unknown threats. Protect your systems with McAfee VirusScan Enterprise's advanced behavioral techniques. With port blocking, file-name blocking, folder/directory lockdown, file share lockdown, and infection trace and block, you can stop many new and unknown malware files cold.

## Proactive Protection from Attacks

McAfee VirusScan Enterprise is the industry's first anti-malware software to offer patented intrusion prevention with application-specific buffer-overflow technology. Now you can protect your users proactively against buffer-overflow exploits that target vulnerabilities in Microsoft applications, and you can enjoy a more robust, advanced level of endpoint system security by integrating your anti-malware technology with intrusion prevention. With McAfee VirusScan Enterprise, your critical servers and data are kept intact and available for business. For added protection, we lock down McAfee VirusScan Enterprise files and services so that malicious threats and attacks don't disable them.

## Optimized for Fast Performance and Reduced System Impact

McAfee VirusScan Enterprise has been designed to reduce system impact while scanning for threats. Its persistence-caching technology saves a list of clean, scanned files. This allows the scanner to reduce duplicate file scanning, dramatically improving both on-access and on-demand scanning. With a reduced memory footprint and faster boot times, users will have lower power requirements than with prior versions.

## Specifications

### Workstation

- Windows 10
- Windows 10 for Embedded Systems
- Windows 8.1
- Windows 8
- Windows 7
- Windows 7 Professional for Embedded Systems
- Windows 7 Ultimate for Embedded Systems
- Windows Vista
- Windows Vista Business for Embedded Systems
- Windows Vista Ultimate for Embedded Systems
- Windows XP SP3
- Windows XP Professional for Embedded Systems 32-bit
- Windows XP Tablet PC Edition SP2
- Windows Embedded for Point of Service (WEPOS)

## McAfee Global Threat Intelligence Technology Provides Real-Time Security

McAfee Global Threat Intelligence (McAfee GTI) offers one of the most comprehensive protection services on the market. With visibility across all key threat vectors—file, web, email, and network—and a view into the latest vulnerabilities across the IT industry, we correlate real-world data collected from millions of sensors around the globe and deliver real-time protection via our suite of security products. McAfee GTI works anytime, anywhere—at home, at work, or on the road.

## Manage Your Security

Centralized management and enforcement is the key to effective and efficient protection. McAfee VirusScan Enterprise is deeply integrated into our McAfee ePO security management platform. The McAfee ePO platform provides centralized deployment, policy configuration and enforcement, and detailed reporting for McAfee VirusScan Enterprise, as well as many other of our security products.

## Easily Manage Quarantined Files

Configure policies to manage quarantined items easily with the quarantine policy manager. Before an on-access or on-demand scan cleans or deletes a file, it creates a backup copy of the original file and a registry value in the quarantine directory.

## Safeguard Email Programs

McAfee VirusScan Enterprise includes the ability to detect and clean viruses in Microsoft Outlook and Lotus Notes email on client systems. It scans all client email messages that come to the desktop, including HTML text and attachments.

## Automatic Updates

Virus security products are only as good as their most recent updates. With McAfee VirusScan Enterprise, automatic daily updates ensure that your desktops and file servers are always up to date with the latest .DAT files and engines.

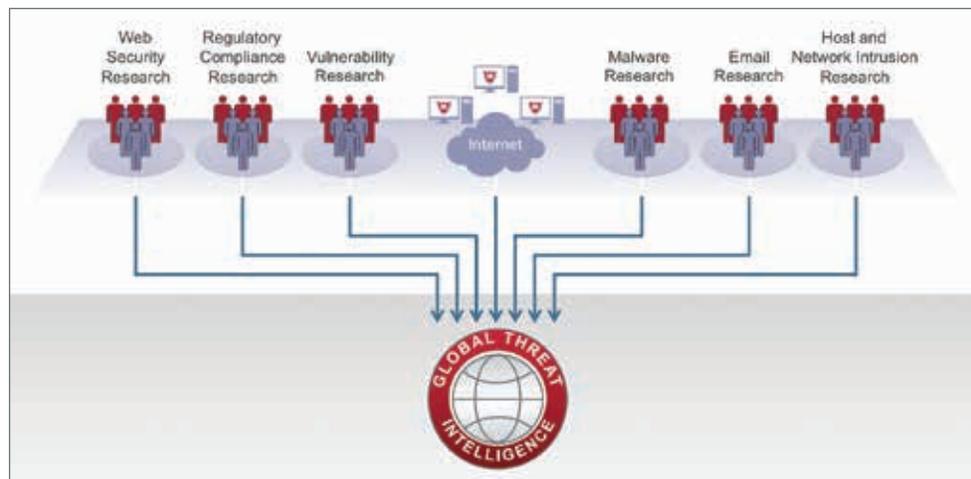

Figure 1. McAfee GTI integrates real-time threat information across the six major threat vectors.

### Specifications cont.

#### Server

- Windows Server 2012 R2
- Windows Server 2012
- Windows Small Business Server 2011
- Windows Embedded Standard 2009
- Windows Embedded Point of Service 1.1 SP3
- Windows Embedded Point of Service Ready 2009
- Windows Server 2008 R2
- Windows Server 2008 SP2: Standard, Enterprise, Datacenter, Foundation, Web, HPC
- Windows Small Business Server 2008 SP2
- Windows Server 2003 R2 SP2
- Windows Server 2003 SP2
- Windows Small Business Server 2003 R2 SP2
- Windows Small Business Server 2003 SP2
- Citrix Xen Guest
- Citrix XenApp 5.0, 5.6, 6.0, 6.5, 7.5, 7.6

### Cutting-Edge Endpoint Protection

McAfee VirusScan Enterprise is capable of integrating with McAfee Threat Intelligence Exchange to provide innovative endpoint protection. Using configurable rules, the McAfee Threat Intelligence Exchange VirusScan Enterprise Module leverages combined intelligence from the local endpoint context (file, process, and environmental attributes) and the current available collective threat intelligence (for example, organizational prevalence, age, reputation, and more) to make more accurate file execution decisions.

### Protected by McAfee Labs

With a global research footprint, McAfee Labs provides the most comprehensive global threat intelligence in the industry. Backed by a portfolio of more than 400 patents and a network of millions of sensors spanning the Internet, McAfee Labs delivers unparalleled protection against both known and emerging threats via a complete suite of security products.

### Global Professional Services and Technical Support

Along with our Intel Security Alliance integration partners, we offer a wide variety of professional services that help you maximize your investment in security. We help you assess, plan, deploy, tune, and manage your solutions more effectively and more efficiently.

Make sure that everything runs smoothly during and after installation with flexible programs from McAfee Technical Support. Our highly skilled and certified security specialists have a wealth of knowledge and resources at their fingertips and can be considered as an extension of your IT team.
