impero ed teach

Impero EdTeach is our industry-leading cloud-based classroom management module for enhancing digital learning. It empowers teachers with a range of classroom control, instructional and monitoring tools, designed to keep students on task, focused and engaged. A simple and intuitive web-based interface, specially developed with teachers in mind, gives educators the confidence to use technology in their lessons.

The key features

Online testing

Setting up a secure testing environment with the ability to restrict or allow access to specific websites and applications, automatically open an online testing resource on all devices, and monitor student activity in real time.

Session tracking

Helping teachers to track learning within a lesson, and plan in response to the needs of students, by assigning tasks which students can mark as complete as they progress.

Real-time monitoring

Focusing learning with a live thumbnail view of all student screens, including all open tabs, providing teachers with visibility of what their students are working on.

Easy tech

Maximising learning time with the ability to remotely control student devices to lend assistance or demonstrate tasks. Providing a range of simple tech tools for teachers, such as powering on devices at the start of a lesson or resetting student passwords during a lesson, so they can manage the immediate digital learning environment quickly and easily.

Google Classroom and flexible grouping

Enabling teachers to sync Google Classroom groups with classes in **Impero EdTeach**, without the need to rely on the admin team. Flexible grouping structures offer cross-platform compatibility to support project-based learning (including mixed ability/age group projects) to promote learner engagement.

Teaching tools and screen broadcasting

Removing distractions and focusing attention through single-click actions, including lock screen, disable internet and mute sound, while saving time by pushing out a specific URL or tab to student devices. Broadcast a teacher's screen to all devices to demonstrate tasks and share resources, or broadcast a student's screen to showcase exemplary work.

Restrictions and access

Improving productivity by relaxing or tightening access to online content in real time (alongside a school's web filter), empowering teachers to adapt a student's online experience.

Messaging & live chat

Enabling non-disruptive communication between teachers and students, or working groups, to assist remotely, provide feedback, or for collaborative working sessions.

Enforce acceptable use policies

Enforcing customisable on-screen acceptable use policies (AUPs), with different policies for different groups of students, to remind students how to behave responsibly online.

The key benefits

Focus learning

Removes the complexities of using technology in the classroom and empowers teachers to deliver inspiring and interactive lessons. With real-time visibility of every student device, teachers can monitor usage and block certain websites or content; this serves to focus students' attention and remove the many distractions associated with online learning.

Save time

Simplifying numerous classroom activities, including pushing a URL to multiple devices and logging students on and off machines, helps to maximise learning time and improve student outcomes. The ability to create online testing conditions, including restricting access to websites and applications and monitoring student activity in real time, allows teachers to create secure environments quickly.

Improve communication

Teachers can privately message students remotely by providing feedback, answering questions or lending support. The group chat functionality is great for collaborative working or students using breakout areas, while screen broadcasting can be used to demonstrate a task or highlight exemplary work.

Track progress

Live real-time monitoring and task tracking enables teachers to assess learning over time and respond to the needs of students at both a class and individual level - a key requirement of Ofsted.

Promote good digital citizenship

Allowing young people to navigate the digital world safely and responsibly, with sophisticated monitoring tools acting as a safety net, and empowering teachers to intervene and educate where necessary.

Address online behaviour in real time

Real-time monitoring helps teachers to identify inappropriate online behaviour or misuse as it occurs, so that incidents can be dealt with promptly and addressed in the same way as offline behavioural or safeguarding issues.
